1) Parameter not included in the scope of accreditation.

2) The lower limit of the measuring range of the accredited method, which is also the limit of quantification set by the Laboratory.

3) Aspartic acid – the result is the sum of asparagine, aspartic acid and its salts.

4) Glutamic acid – the result is the sum of glutamine, glutamic acid and its salts.

5) Cysteine – the result is the sum of cystine and cysteine.

6) The composition of amino acids - accredited measuring range: 0,005-10%.

7) Glutamic acid – the result is the sum of glutamic acid and its salts.

8) Aspartic acid – the result is the sum of aspartic acid and its salts.

The results refer only to the samples received. When a measurement uncertainty is given, it is an expanded uncertainty estimated for a coverage factor k=2 at 95% confidence level and is not including sampling uncertainty, unless otherwise stated. When the conformity is stated J.S. Hamilton Poland Sp. z o.o. applies the simple acceptance decision rule in accordance with ILAC-G8:09/2019, unless otherwise reported. If the "result" column of the accredited method contains a record: "<" or ">", it means, that it is the test outcome directly related to the lower or upper limit of the measuring range of the accredited method, whereas the given expanded measurement uncertainty relates only to the lower or upper limit of the measuring range of the accredited method respectively. In such a case, the Laboratory presents the opinion and interpretation in the "statement of conformity" column, which is based on the obtained test outcome.
